We wish to acknowledge the following organizations: their data and resources are our own and do not necessarily reflect the views of data custodians.

Health Information (CIHI) and Statistics Canada, the opinions expressed on this paper are our own and do not necessarily reflect the views of data custodians. It is the first pan-Canadian population-based study of hospital usage among children with medical complexity.

The purpose of this study was to evaluate hospital utilization among children with medical complexity in a pan-Canadian population-based study. We used data from the Canadian Institute for Health Information (CIHI) and Statistics Canada. The opinions expressed on this paper are our own and do not necessarily reflect the views of data custodians.

An accurate portrait of the patterns of hospital utilization and outcomes for this population is needed to set targets and inform efforts to improve service delivery.
