Keep your finger on the pulse of the healthcare industry and advance your practice by enrolling in UNB’s graduate nursing program. Our programs provide integrative knowledge of research, theory and practice while exploring the complex challenges of modern health and health care.

Nursing students work with an academic advisor to systematically design a program of study aligned with their unique, professional health care interests. Many students find successful teaching and research assistantship opportunities, external funding and meaningful engagement with partners and stakeholders. Our graduates are well-prepared for advanced positions within the health care sector, government and non-governmental organizations. Others go on to complete doctoral programs.

**RESEARCH AREAS**

- Chronic Illness
- Health in LGBT Communities
- Communicable Diseases (HIV)
- Violence & Healthy Living in the Aftermath of Abuse
- Parenting & Children’s Health
- Aboriginal Health & Wellness
- Living with Eating Disorders
- Cancer Survivorship
- Healthy Aging
APPLICATION REQUIREMENTS

• Applicants normally hold a BN or BScN degree with at least a B in undergraduate statistics and nursing research. A cumulative GPA of at least 3.3 (B+) is expected.

• Applicants must meet the criteria to become a registered nurse in the province of New Brunswick, and must be registered by September of the year the student begins the program.

• Applicants must provide:
  • Three references (at least one academic reference)
  • A written statement of the applicant’s professional interests and career goals. Applicants should indicate any ongoing competing demands on their time and the modifications they propose to make to integrate the extensive time commitment needed to complete program requirements (course work, practica, and thesis research/project).

CURRENT FACULTY & STUDENT RESEARCH

• Understanding the Impact of Violence on Health: Investigating the effects of violence on health and developing strategies to lessen its impact

• Personal Stories of Those Affected by Cancer: Studying the ways in which different people experience and respond to the diagnosis.

• Helping Those Living with an Eating Disorder: Exploring the mystery and consequences of eating disorders, as well as the concept of ethical sensitivity in professional practice.

• Healthy Aging: Partnering with the Alzheimer Society of New Brunswick and the Atlantic Institute on Aging to better understand healthy aging.

• Innovations in Nursing Education: Searching for ways to engage students in developing technologies and strategies that support learning in the classroom and beyond.
